

ASSIGNMENT

Implement Task Manager

1. Using HTML/CSS/Javascript, implement a task manager with n number of lists (Ex: Pending, On Hold, Doing, etc..)
2. We should be able to add a list, add items to list, delete items from the list, edit item description.
3. Drag and Drop of items between lists should be possible.
4. Object-Oriented JS Code would be a plus.
5. Solve time: 4 hours
6. (Expecting the Task Manager to be something similar to trello.com)

Note -

1. Once done with the test, mail us back the files in zip format.
2. **No Javascript frameworks.**
3. Babel is ok.
4. Bootstrap or other css framework is ok, but brownie points for not using it.
